

It's not too late to rewrite your life story

For people who are considered obese, we want you to know you are not alone in this struggle.

Castleview Hospital offers a comprehensive bariatric surgical weight loss program. We have a team of professionals ready to help you determine the right option for you. We'll help you prepare physically, mentally, and emotionally for surgery, including psychological and dietary evaluations. We also offer ongoing support after surgery to assist with lifestyle changes necessary for long-term success.

Meet Your Surgeon

Jon S. Pressett, M.D.

In addition to being a general surgeon, Dr. Jon S. Pressett is also a fellowship-trained bariatric surgeon and leads our bariatric team. He is kind, compassionate and understands the struggles and health risks associated with obesity. He specializes in weight loss surgeries including:

- Laparoscopic gastric bypass – creation of a small pouch from the upper stomach and a bypass of the remaining stomach.
- Laparoscopic sleeve gastrectomy – the stomach is permanently reduced to about 15% of its original size.
- Laparoscopic adjustable gastric banding – also called “lap band.”

Most bariatric surgery is performed as a minimally invasive procedure that produces a smaller scar area and a faster healing timeframe.

Jon S. Pressett, M.D.
General Surgeon
